WHERE IT GOES
This part in colour, its neighbours in grey

HOW TO MAKE IT AND HOW IT FITS

- Shaft 25 x 633; square ends 20 across flats, 40 long, for the cranks
- Hub 26 long, bored to slide on the shaft; 12-tooth sprocket welded to it
- Drill hub and shaft together for the 3 mm shear pin, 12 from the sprocket face
- Crank arms 250 between centres with a square socket and a ball-lock pin
- Handles 32 x 120 turn on M12 bolts; arms 180 deg apart
- Check: hub turns freely with the pin out, locks with it in
