WHERE IT GOES

This part in colour, its neighbours in grey

HOW TO MAKE IT AND HOW IT FITS

Pawl: 12 mm pivot hole, nose radius 3, 150 from the drum axis at the pivot

Pawl stops the drum turning to pay out; flip it up to lower

Band 270 deg round the brake drum, lining bonded on, 6 mm thick in all

Anchor end pinned to the post behind the drum (the tight end when lowering)

Live end by a 25 x 6 link to the lever, 60 from the pivot

Lever 650 long, 6 kg block at the end: brake on when let go

Check: lever lifts 30 mm to free the drum; 300 N m holding
